

SMITH KAMLESH GAJJAR

Mumbai, Maharashtra, India

✉ smith.gajjar@gmail.com  [linkedin.com/in/smithg09](https://www.linkedin.com/in/smithg09)  www.smithgajjar.dev  github.com/smithg09

Senior Software Engineer with 5+ years of experience across platform engineering, AI systems, and full-stack development. Led and shipped AI-powered products, developer platforms and tooling, GraphQL infrastructure, and customer-facing applications used by over 50M registered users across Codecademy and Skillsoft Percipio.

EXPERIENCE

Codecademy (Skillsoft)

Remote

Senior Software Engineer

Jan 2024 – Present

Stack: Node.js, Next.js, Golang, Ruby on Rails, GraphQL, LangGraph, RAG, Vectorless RAG, PostgreSQL, Kubernetes, Redis, RabbitMQ, AWS, Opentelemetry.

- Launched **LX Studio Spark**, an AI platform generating 8+ content types from user-uploaded documents, taking it from PoC to a production release across **20+ enterprise customers**, built its custom agent harness.
- Re-architected Codecademy's **GraphQL Federation** split into consumer and enterprise graphs in Golang with improved caching and isolated schemas, **cutting query latency by 40%** (500ms to 300ms).
- Tech lead for Skillsoft's **first AI-native Builder pod**, a 3-engineer team owning product development end-to-end that shipped 2 products in under 6 months, a model that **scaled into 11 more pods org-wide**.
- Shipped Codecademy's **Vibe Learning Platform**, a learn-by-building product where AI agents generate full-stack projects, to **10M+ active learners in 2 months** by building a LangGraph-based agentic engine.
- Co-developed Agentor, a shared agent framework library with multi-agent workflows, agent harness, MCP, guardrails and LLM evaluations, reducing new agent scaffolding for **5+ teams** and earning CTO recognition.
- Enabled Codecademy's expansion into 30+ countries by architecting and delivering internationalization (i18n) from scratch, shipping 40+ locales with RTL support across a shared Next.js monorepo.
- Built **ACE (AI Coding Extensions)**, an internal platform for sharing reusable agent tooling (skills, subagents, plugins), used by **15+ engineering teams**, boosting reuse and accelerating AI-native development.
- Led migration of 1000+ videos to in-house infrastructure, shipping a **WCAG 2.1-compliant video player** in the Gamut Design System that improved accessibility and reduced load times via caching and HLS streaming.

Videoverse

Mumbai

Full Stack Developer

Oct 2023 – Dec 2023

- Integrated and managed multi-region payment systems (Stripe, Razorpay, PhonePe), improving checkout success rates and regional compliance.

Tekie (Acquired by UOLO)

Remote

Senior Full Stack Developer

Jun 2021 – Sept 2023

Stack: React, Node.js, GraphQL, React Native, Electron, MongoDB, Redis, Kubernetes

- Founding team engineer and backend/platform lead. Scaled a B2B and B2C EdTech platform serving **500k+ students across 1,000+ schools** with interactive coding curriculum.
- Built an internal GraphQL-based BaaS architecture, reducing API latency **from 2s to 300ms (~80% reduction)** via schema redesign, query optimization, and Redis caching.
- Led GraphQL and platform **team of 7 engineers**, established code review standards and CI checks that reduced review cycle time and caught regressions before production.
- Scaled production infrastructure across Managed Kubernetes, MongoDB, PostgreSQL, built CI/CD with GitHub Actions, integrated AWS S3, Elastic Transcoder, and CloudFront.
- Improved **Core Web Vitals to 99th percentile** across web, mobile, and desktop via code-splitting, SSR, and server-side data prefetching.
- Delivered **5+ product PoCs**, an offline Python editor (WASM), a drag-and-drop Blockly playground, informed by on-site visits to 30+ schools to understand student and teacher workflows
- Established observability and analytics (New Relic, Sentry, ELK, GA/GTM/Looker Studio) to monitor and drive app health improvements.

InVideo

Mumbai

Front-end Developer Intern

Jun 2019 – Jul 2019

- Built user-facing modules from Sketch/InVision designs into pixel-perfect responsive screens using Angular, SCSS, and TypeScript. Resolved cross-browser inconsistencies across 5+ browsers via BrowserStack.

PROJECTS

Openplan (openplan.smithgajjar.dev)

- Golang CLI that intercepts an AI coding agent's plan step and opens it in a React-based browser UI to review, annotate, approve or deny the plan before any code is written.
- Built for agent harnesses like Claude Code, adding a human-in-the-loop review and approval layer to agentic coding workflows.

Devbox (devbox.smithgajjar.dev)

- Cross-platform developer toolbox bundling everyday utilities into a single offline app, reducing tool-switching overhead. Built with Tauri (Rust) and React.

Arcgentic - AI Learning Platform (arcgentic.smithgajjar.dev)

- An agentic learning platform that generates personalized content like deep dives, roadmaps, slides, podcasts, and flashcards from a prompted topic or uploaded documents.
- Built around LangGraph orchestration layer with tools, skills and subagent routing in Python and with Go GraphQL microservice, and a React frontend, enabling progress tracking and generation of learning artifacts.

Lookahead (github.com/smithg09/lookahead)

- Built a GraphQL query planning library that transforms nested GraphQL selection sets into recursive MongoDB aggregation pipelines, eliminating N+1 queries and reducing database calls by over 80%.

Termis (github.com/smithg09/termis)

- CLI tool to define iTerm2 terminal layouts and launch full development environments via YAML-based terminal configuration. Built using Python.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Ruby.

Frameworks: GraphQL, Next.js, Node.js, React, Ruby on Rails, Flask, Svelte, Angular, Tauri.

Databases & Queue: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, RabbitMQ, SQS.

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, Jenkins, Grafana.

AI & LLM Frameworks: LangGraph, LangChain, MCP (Model Context Protocol), A2A, agentic harness, RAG (PGVector, Pinecone), LLM evaluations (LLM-as-judge), RLHF & SFT fine-tuning.

Tools: Datadog, Sentry, New Relic, OpenTelemetry, JMeter, Playwright, Jest.

EDUCATION

Bachelor of Engineering in Computer Science

Vivekanand Education Society's Institute of Technology

2018 – 2021

Mumbai, Maharashtra

Diploma in Computer Engineering

K. J. Somaiya Polytechnic

2015 – 2018

Mumbai, Maharashtra
